

Designing the Future

*clear ahead*

SQUARE®

*Square*®

DIMENSION-POLYANT's SQUARE® was designed for use in performance-oriented crosscut or radial sails. These premium polyester styles deliver top performance for off-threadline loads. SQUARE® styles, unique in several respects, are easily identified by the ripstop pattern woven into the substrate, using either 500 or 1,000 denier yarns paired in both the warp and fill direction. The ripstop yarns create an extremely rugged fabric, even in the lightweight styles with the very firm HTP® Plus finish. Larger sails can come with a HMT or MT finish and a more pleasant hand. All the SQUARE® styles feature fairly balanced construction, woven with very tightly packed small denier yarns. Combined with larger size SQUARE® yarns, it makes these styles low stretch in all three directions and suitable for both vertical and crosscut construction in racing and cruising headsails, as well as in small mainsails.
