VM1020 flowmeter

A correct flow rate is vital for the function of a solar system. The RESOL VM1020 flowmeter indicates the flow rate from 1 to 13 litres per minute, with the integrated flow limiter, the value can be throttled. With the also integrated fill/drain valve, flushing and draining processes can be carried out; an opening for the immersion sensor allows for an easy return temperature measurement.

Flowmeter for solar thermal systems
